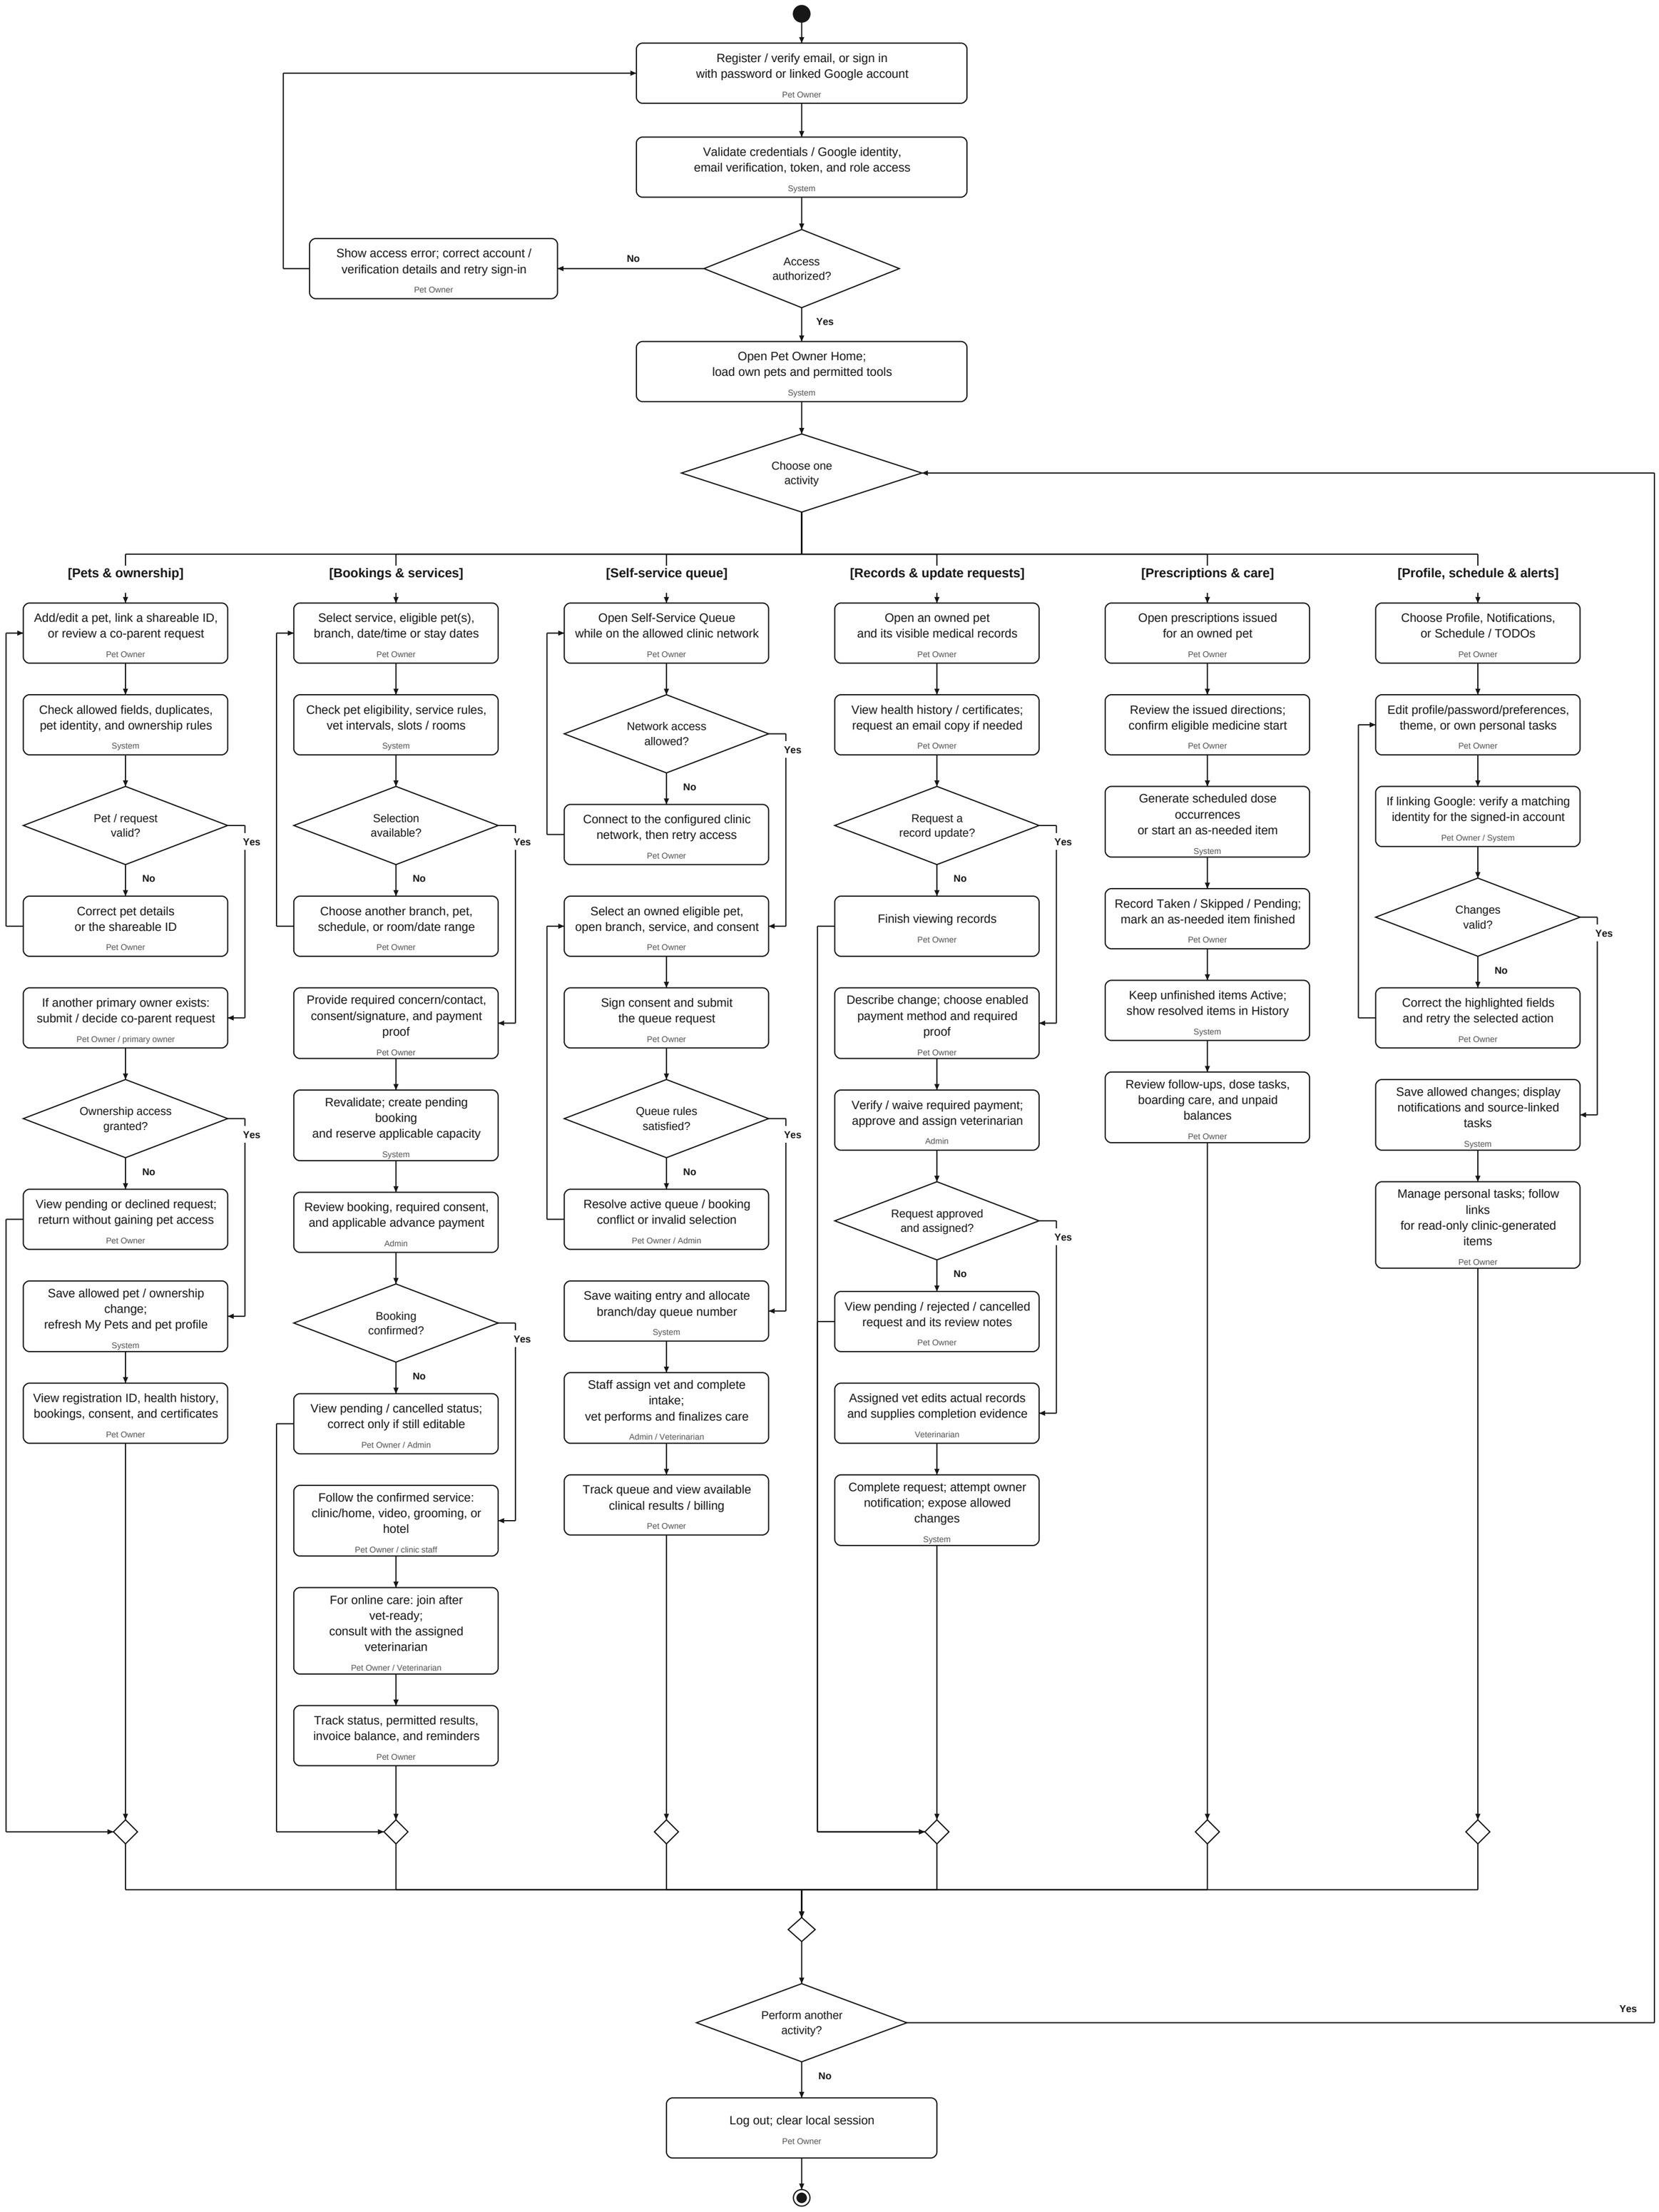
iPawcus | Pet Owner Activity Diagram

Pets, appointments, clinic queue, records, medication checklists, and personal tools

Current local implementation reviewed: 19 October 2026 | Rounded box: activity | Diamond: decision / merge | Small label: responsible actor



Reading the revised diagram

Columns are alternative work areas. Merge diamonds combine alternatives; they do not wait for every activity to finish. Pending reviews may be revisited later.

Use the selected action's validation rules. For a timeout or uncertain write result, refresh the record before resubmitting. Leaving an activity returns to the menu.

Booking route depends on the selected service. Routine grooming and Pet Hotel do not require the clinical queue/diagnosis sequence.

Proof submission is not verified payment. An online call becomes joinable when the assigned veterinarian marks it ready.

Only owned/co-owned pets and owner-visible medical content are available. Prescription checklist entries record reported use.
