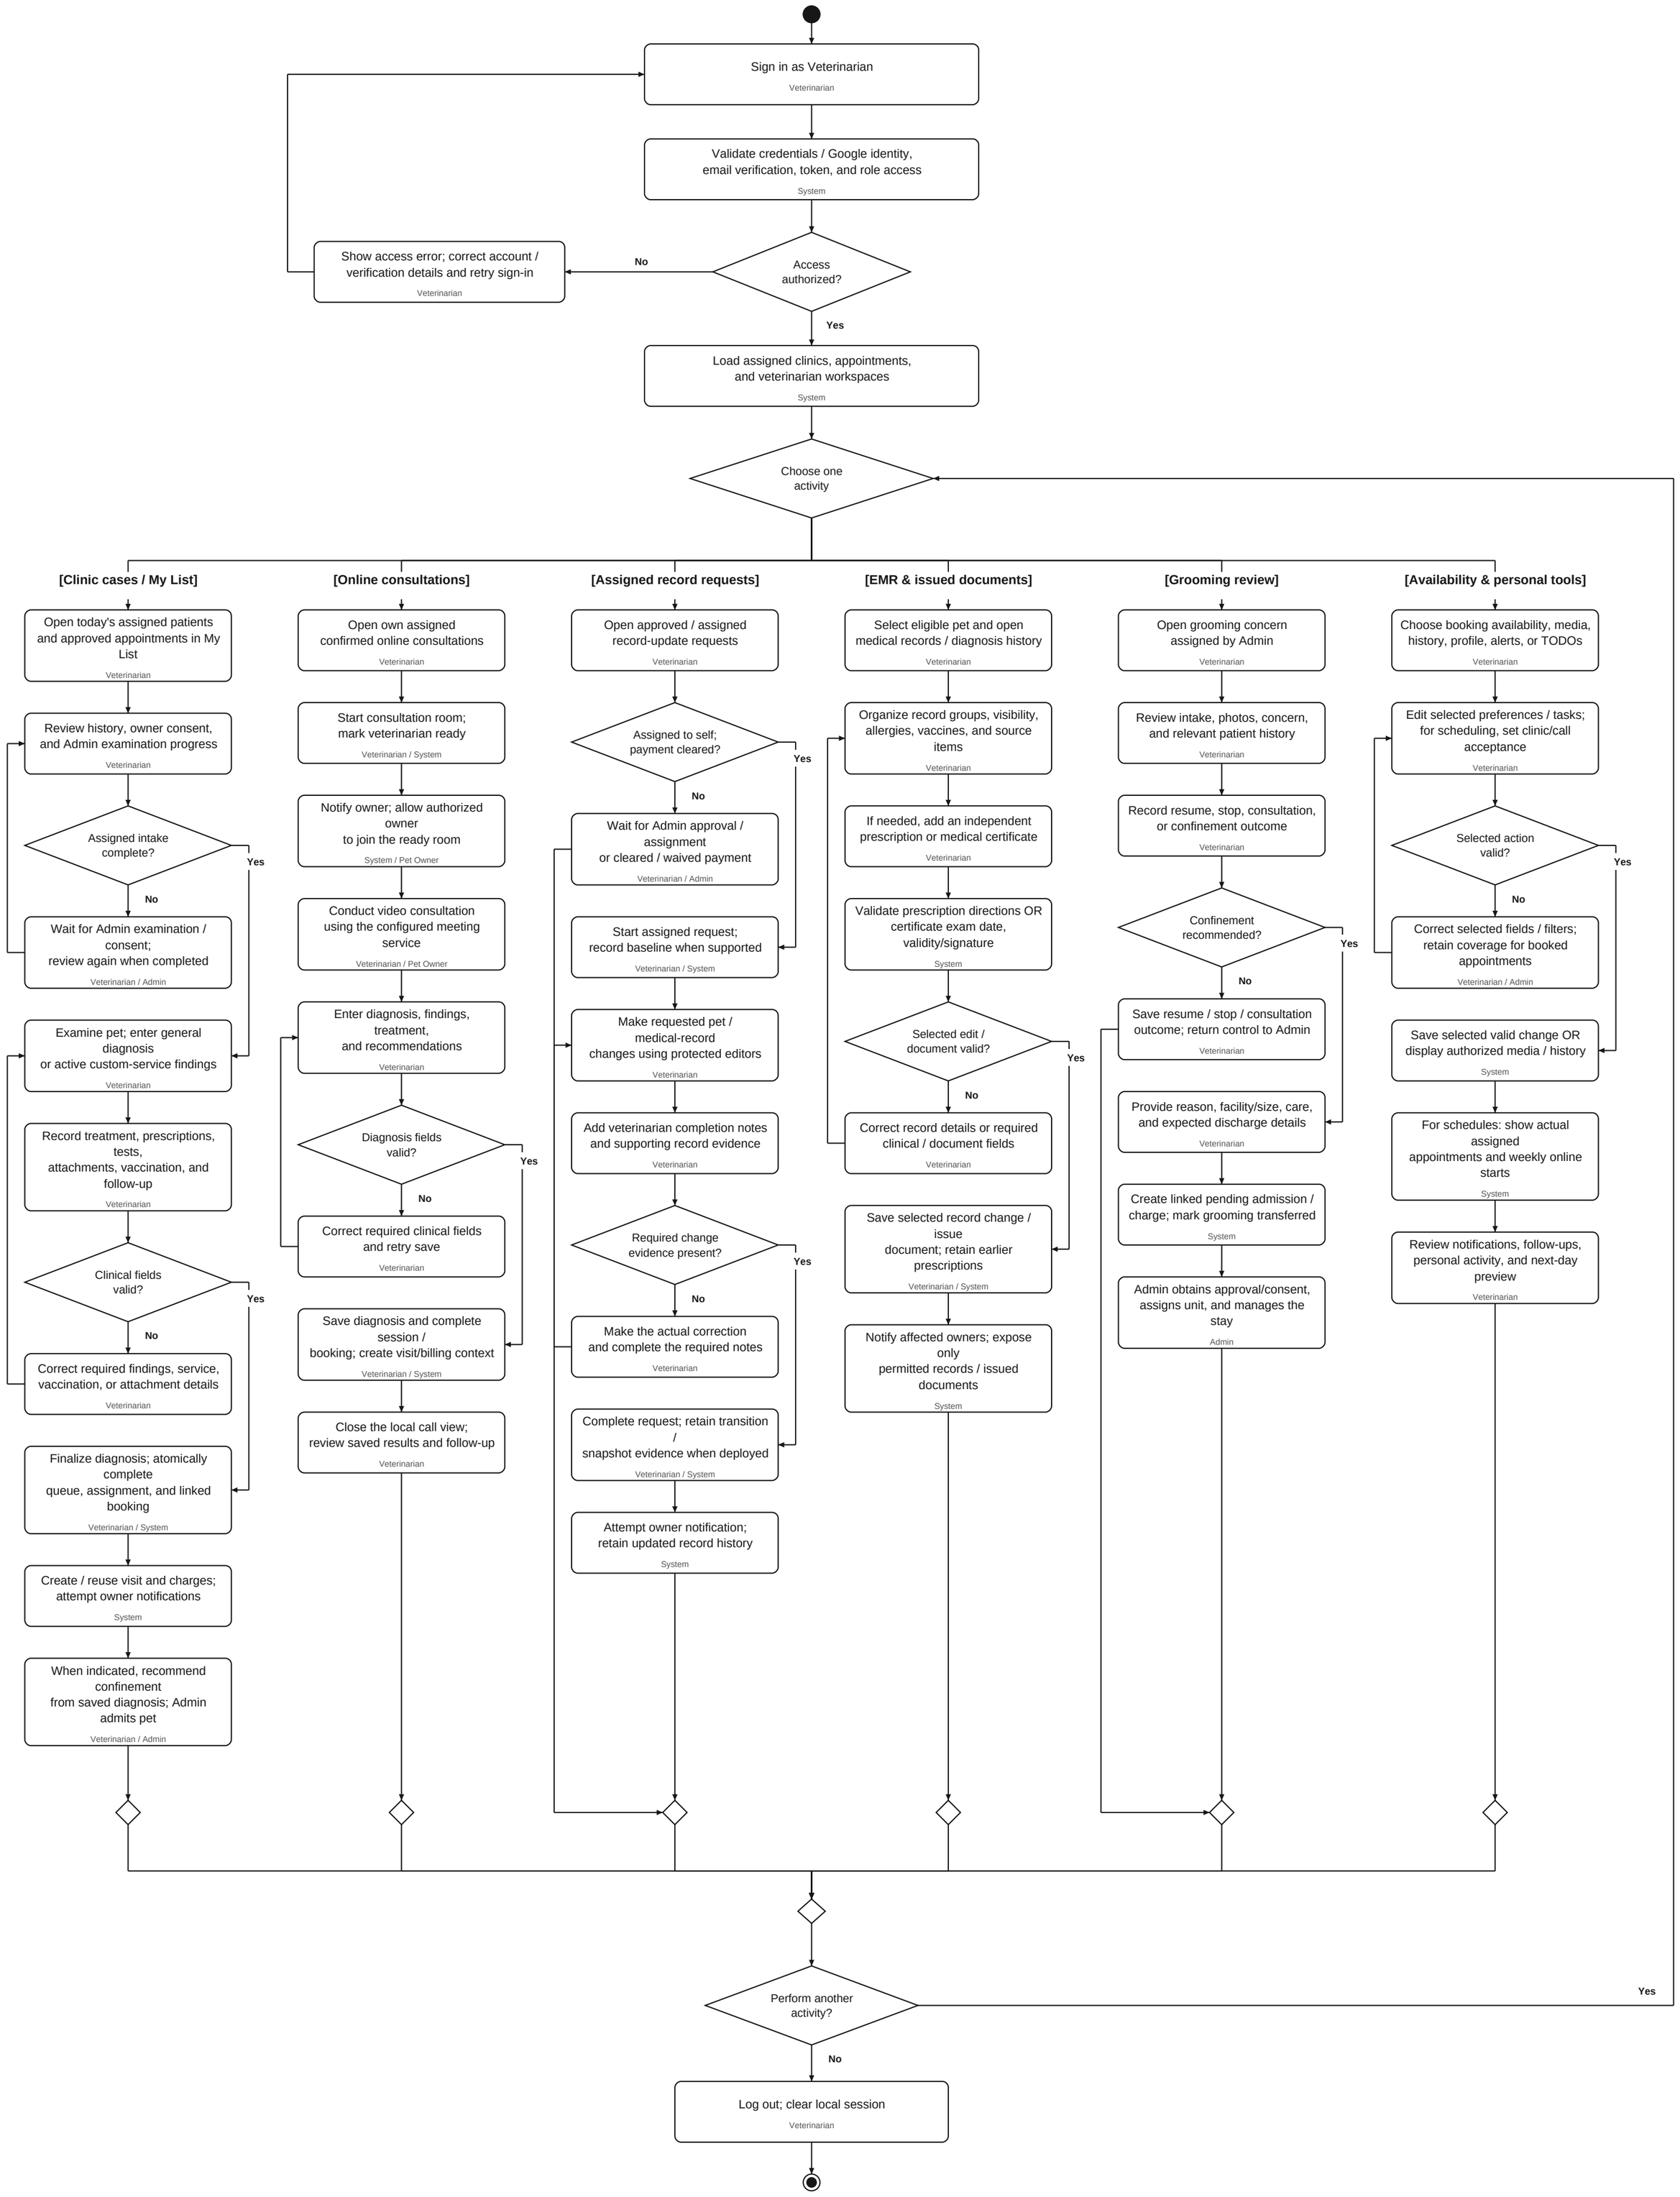
iPawcus | Veterinarian Activity Diagram

Assigned clinical care, online consultations, record work, prescriptions/certificates, review, and availability

Current local implementation reviewed: 19 October 2026 | Rounded box: activity | Diamond: decision / merge | Small label: responsible actor



Reading the revised diagram

Columns are alternative work areas. Merge diamonds combine alternatives; they do not wait for every activity to finish. Pending reviews may be revisited later.

Use the selected action's validation rules. For a timeout or uncertain write result, refresh the record before resubmitting. Leaving an activity returns to the menu.

Current My List is populated by Admin queue assignment. Do not add a compulsory separate Approved List / receive-case screen.

Diagnosis finalization checks the assigned completed intake where installed. Clinical completion creates/reuses billing context; it does not verify payment.

Online availability is a separate recurring call-start calendar. Published branch visits are retired. Only the actual veterinarian role issues medical certificates.
